## Front-end

- All written in HTML + templating
- Templating language supports:
  - **Layouts**
  - **Partials**
  - **Views**
- These are similar to 11ty equivalents

- The starter app has a menu + 3 'Views':
  - Start
  - Dashboard
  - About

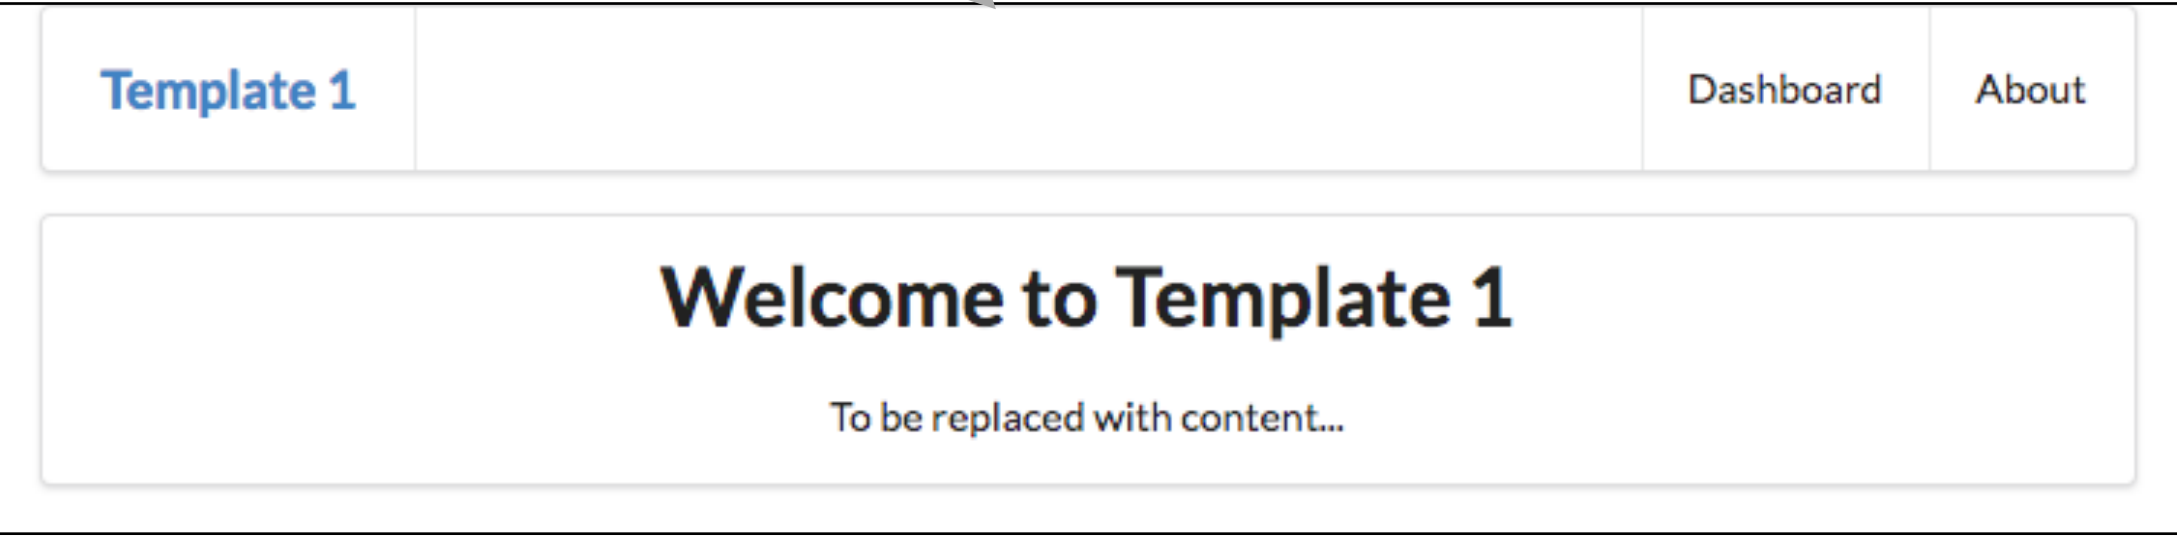

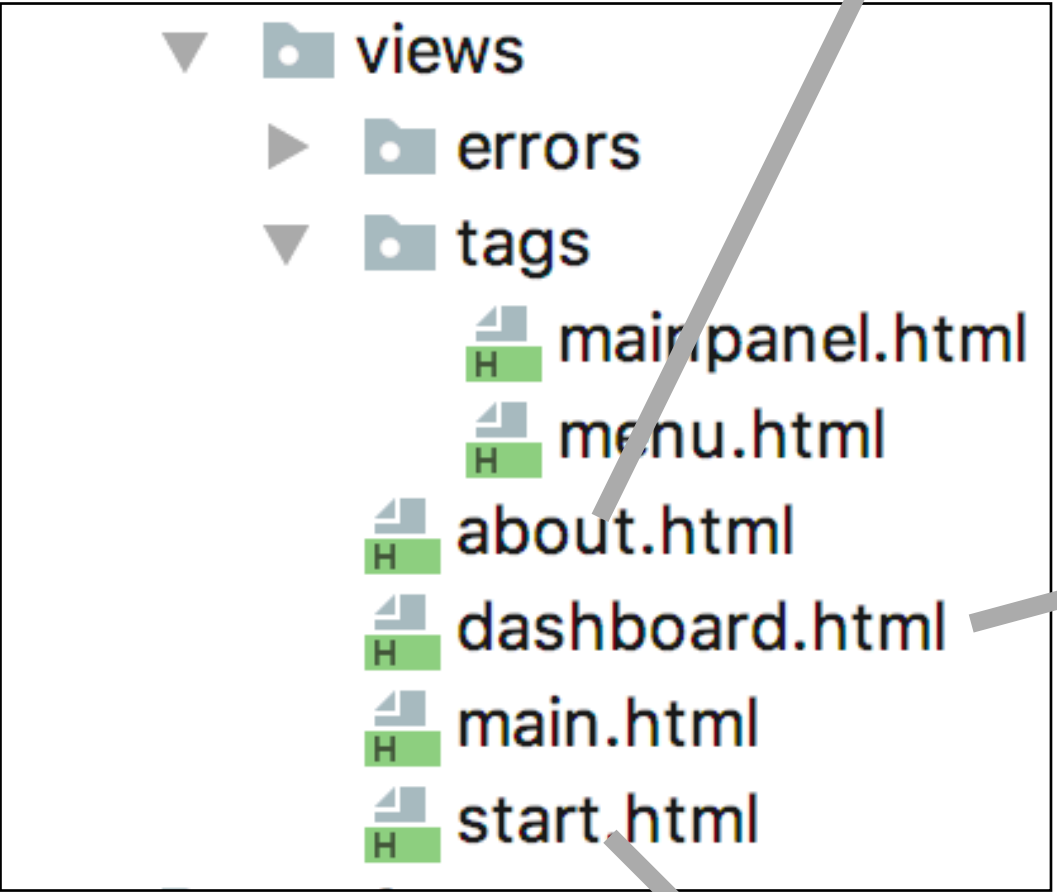

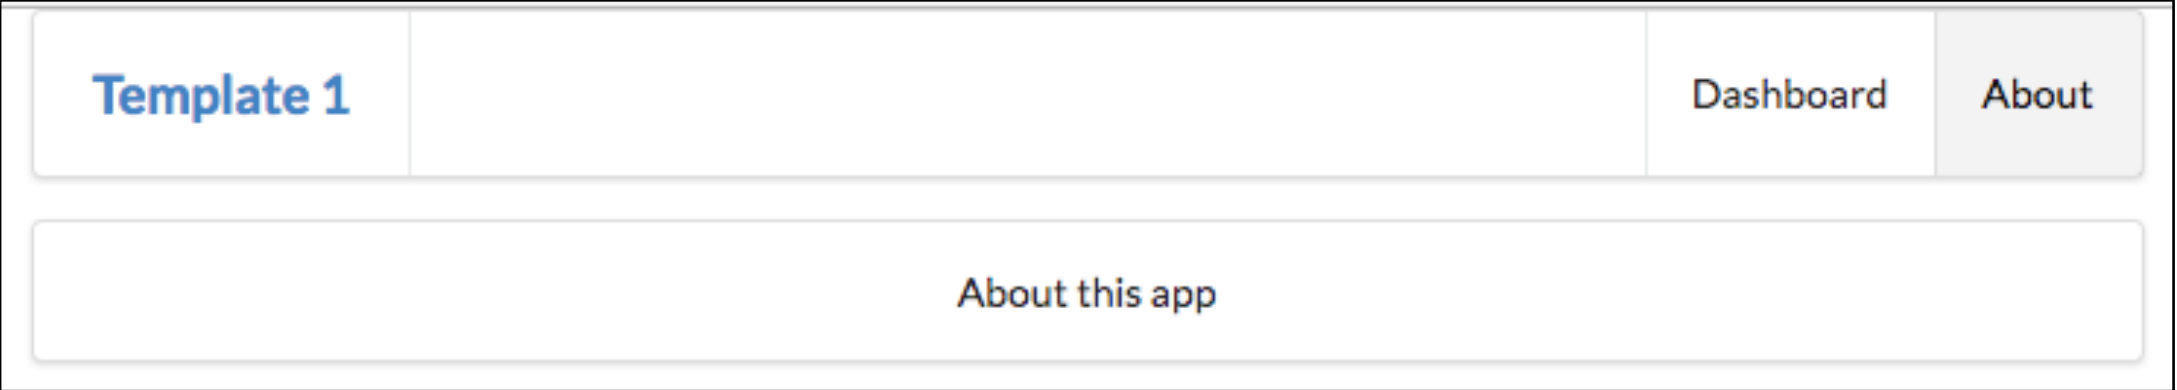

main.html

- All views will be based on structure laid down in **app/views/main.html**
- Includes Semantic-UI CSS library

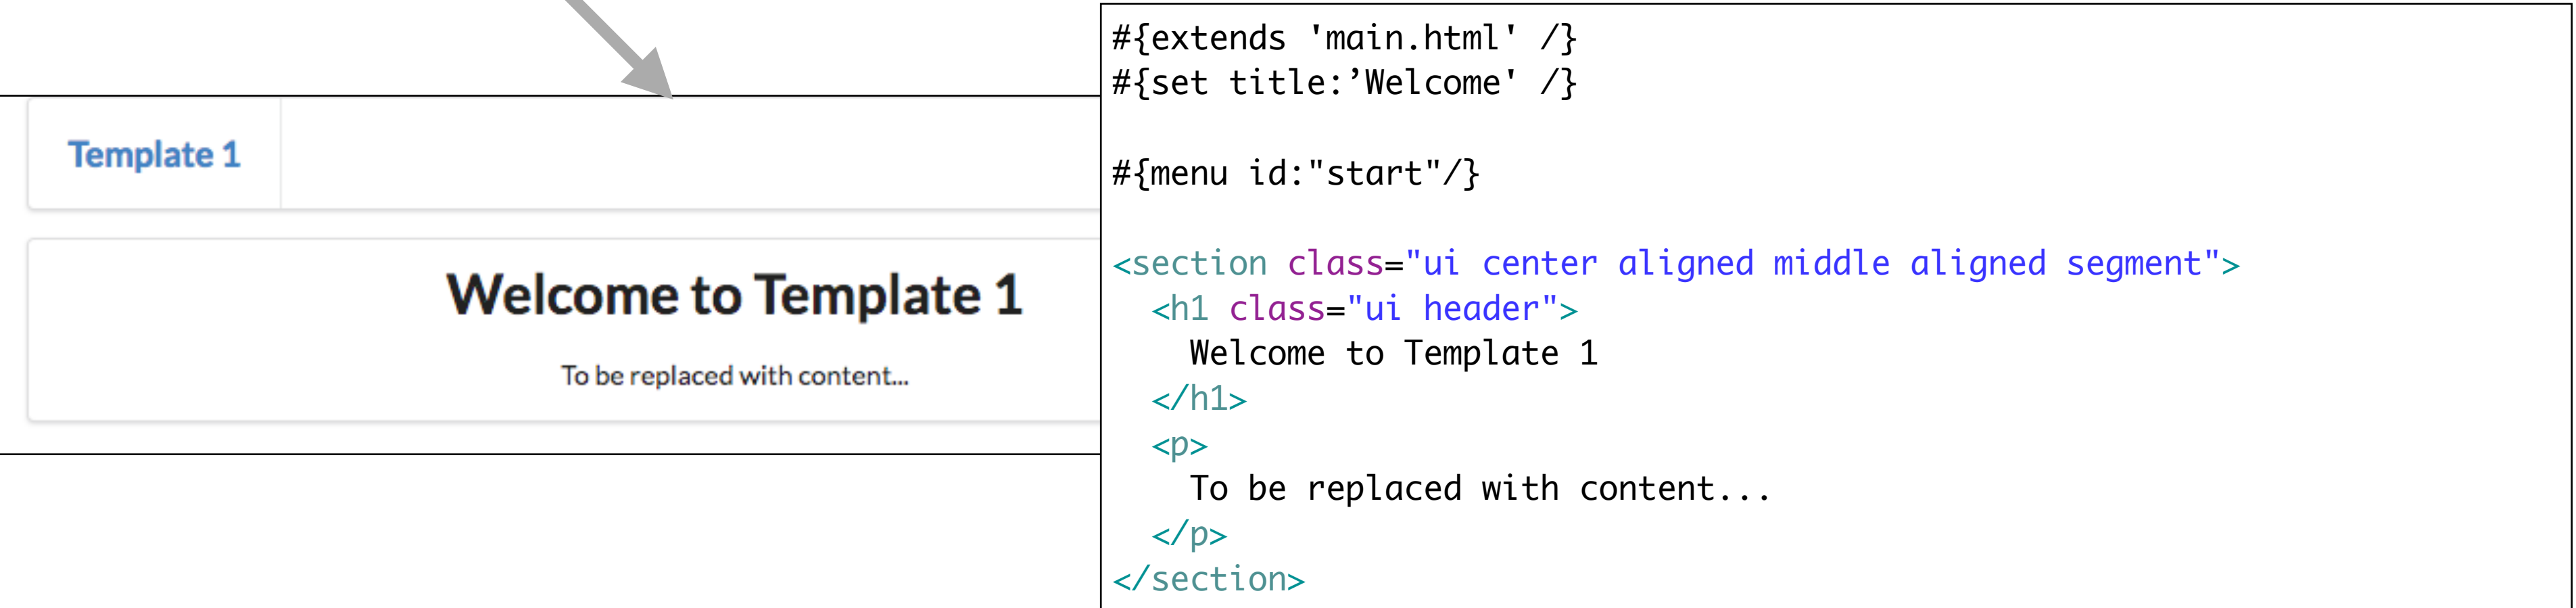

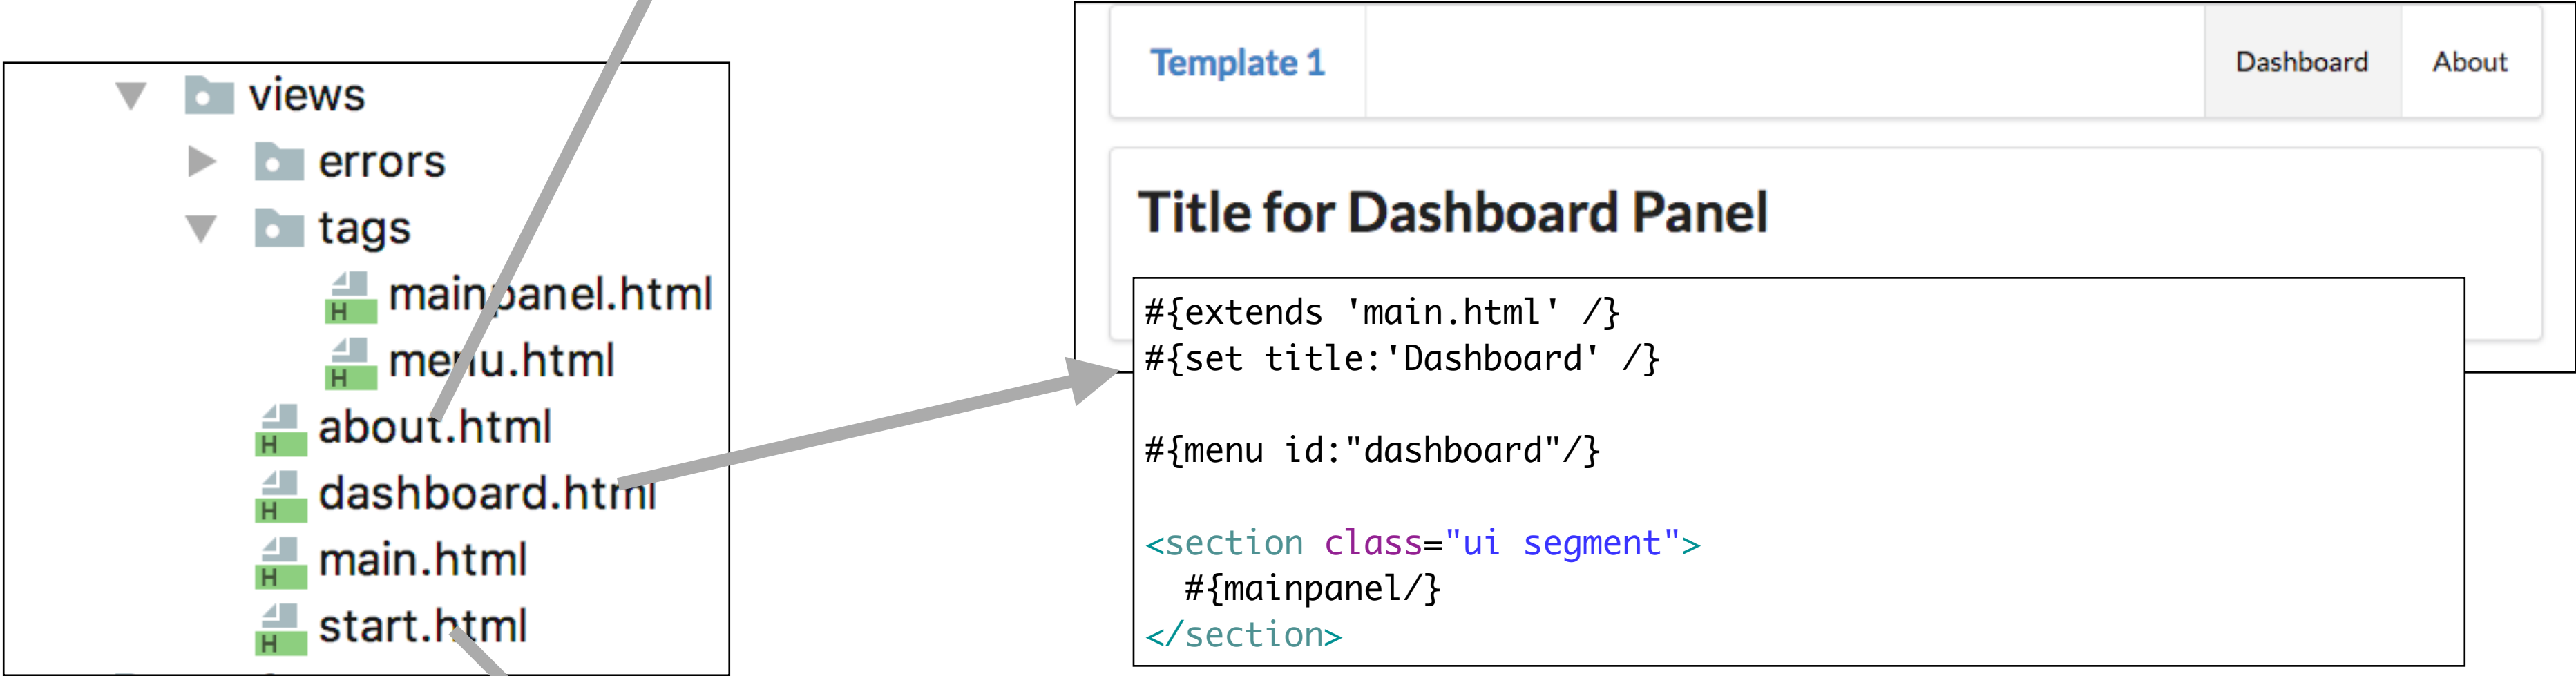

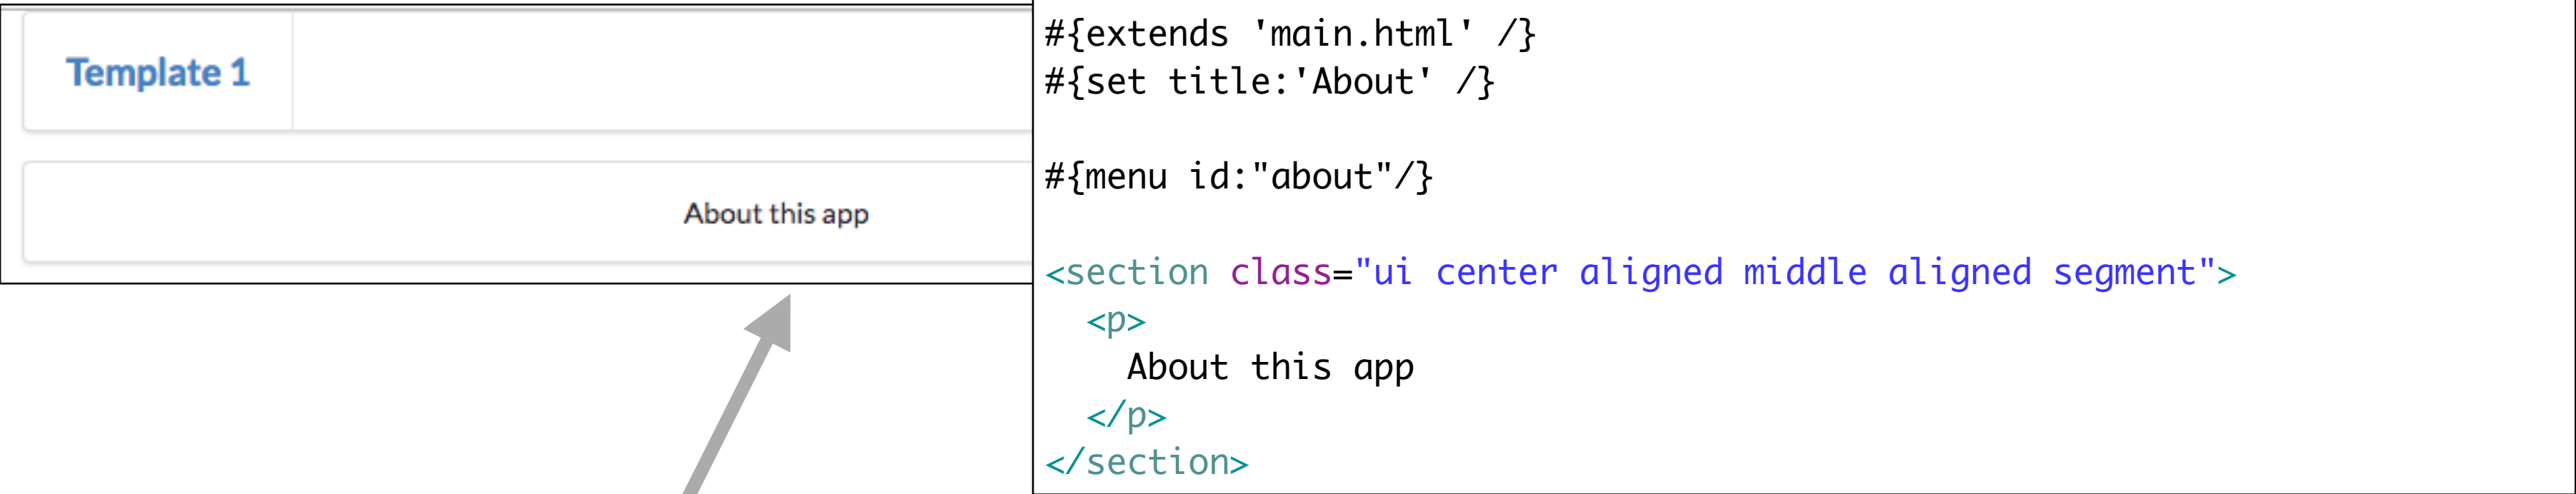

```
<!DOCTYPE html>
<html>
  <head>
    <title>#{get 'title' /}</title>
    <script type="text/javascript" src="https://cdnjs.cloudflare.com/ajax/libs/jquery/3.2.1/jquery.min.js"></script>
    <script type="text/javascript" src="https://cdnjs.cloudflare.com/ajax/libs/semantic-ui/2.2.8/semantic.min.js"></script>
    <link type="text/css" href="https://cdnjs.cloudflare.com/ajax/libs/semantic-ui/2.2.8/semantic.min.css"></link>
  </head>
  <body>
    <section class="ui container">
      #{doLayout /}
    </section>
  </body>
</html>
```

- View content will be inserted into `#{doLayout /}`
- (equivalent to **{{content}}** in 11ty)
- title can be replaced by view (more on this later)

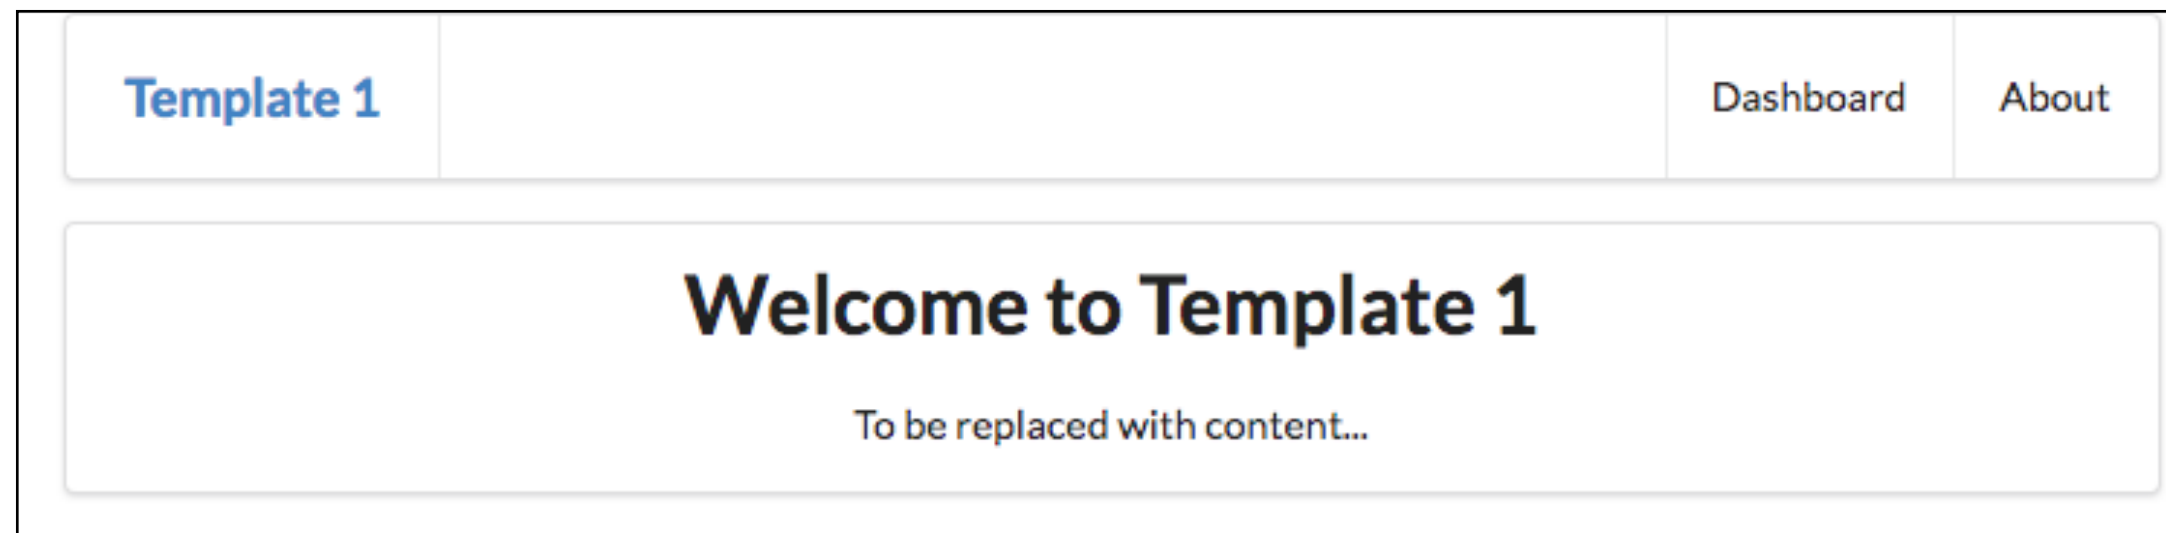

welcome
